Fitness, Training & Vitality Course

- ✓ The images and dimensions are provided for information purposes only. Some measurements have been rounded up by 6 inches and the required surface indicated varies when modules are combined.
- ✓ Products are subject to change without notice.
- ✓ The technical drawings show the above-ground part only. All modules are firmly anchored in the ground for safety reasons.
- ✓ All information and images contained in the catalogues are the exclusive property of Eskair.
- ✓ Contact us for the high-resolution version of the catalogues.

Eskair designs, manufactures and installs outdoor recreational equipment made from cedar. We offer a wide range of playground modules and accessories, original street furniture, as well as adult fitness equipment, all adapted to the natural environment to create a striking effect! Eskair also provides a turnkey planning, development and integration service, a support service and an engineering and architecture department in order to carry out your most ambitious projects.

Founded in 2014 by Éric Bourgault, a recreologist by training and construction contractor, the Drummondville company distributes its products throughout Quebec, Canada and the United States. Eskair's focus is on the needs of creative and psychomotor development in childhood, as well as to promote healthy lifestyles. We are committed to creating meaningful playgrounds, as well as exercise, teaching and Socialize areas suitable for the local environment, which are well designed and inspired by nature.

SIGNATURE ESKAIR SOLUTIONS

With its expertise in designing smart and forward-thinking spaces, Eskair has developed an approach to support and collaborate with its customers. We also specialize in schoolyard revitalization and have the ability to create custom equipment to meet your needs. Our recognized expertise greatly simplifies your project and guarantees that it will be appreciated by your customers.

Our range of products and services

- ✓ Preschool and school playgrounds (18 months to 12 years)
- ✓ Urban, parks and public spaces furniture
- ✓ Fitness courses
- ✓ Project design integrated into your landscape and environment
- ✓ Custom or themed playground design
- ✓ 2D and 3D project implementation plan
- ✓ Consultation and project concept design

Eskair, oversized, playful and creative modules

Overview

- ✓ All of our equipment meets the Canadian CAN/CSA Z614-20 playground standard.
- ✓ Our playgrounds are equipped with CSA-certified cedar fibre for play areas.
- ✓ All of our play modules are constructed from eastern white cedar or western red cedar, species known for their resistance to rot. Our equipment is therefore delivered without chemical treatment. Cedar is also known to pose little risk of splinters, has good structural uniformity and very high resistance to insects in its natural state.
- ✓ We use cedar logs 4 to 12 inches in diameter that give our equipment a remarkable appearance and strength, far exceeding the structural integrity requirements of the equipment.
- ✓ Our 100% natural and untreated wood enables us to offer you a warranty for up to 12 years and requires little maintenance. Ask for a list of our warranties for more details!
- ✓ We use quality hardware that doesn't rust and is anti-theft. Our cables are made of steel covered with industrial-grade braided polyester.

- ✓ Check out more information and more photos and videos on the web:

Eskair: A history of innovation and dedication

Eskair started out in 2014. Its business consisted of helping customers to implement development plans and install play modules, with a primary goal of promoting contact with nature and pushing oneself further. In 2016, the municipality of Saint-Claude in Quebec wanted to design a challenge course "as in the days of summer camps".

We had previously had this kind of request several times from across Quebec and we had always refused, because the original concept of a typical challenge course is unfortunately not compliant with CSA playground standards, a standard that we hold dearly and which we wanted to respect.

However, this time we gained the municipality's confidence and this is how Eskair proposed a playground inspired by the principles of challenge courses. There was a limited budget for this project, so the Eskair team agreed to take it upon itself to complete this project free of charge in order to provide more leeway on the quality of the components. It was a true team effort by enthusiasts who felt the project would be a small revolution in this domain!

After the entire team completed weeks of volunteer work, the first Eskair park was inaugurated! This project propelled the company and it has been growing steadily ever since, a testament that following your passion can lead to great things! Every employee who volunteered for this project in 2017 is still working for Eskair to this day, which is a source of pride!

The Eskair team today

Eskair is comprised of 15 employees who hold various positions in the following departments: Administration, Engineering and Design, Sales and Marketing, Production and Installation.

Our products are now distributed throughout Quebec and we are currently expanding across Canada and the United States.

The Canadian standard for outdoor play areas

All of our equipment is designed, manufactured and installed to meet the Canadian CAN/CSA Z614-20 playground standard.

In order to meet all this standard's guidelines, Eskair has an engineer on its team who is trained as a playground inspector. In addition, we follow a protocol to verify the various aspects of the standard during the various stages of creating new equipment. The standards and notion of child play safety is our priority during procurement, workshop drawings and installation. We want to be responsible at all levels. Our engineer is also responsible for the application of paragraph 9 of the CAN/CSA Z614-20 standard, which refers to structural integrity tests.

When the project is complete, we provide the customer with a certificate of compliance stating that the equipment and installation meets the CSA standard. We also hand over the technical sheets for each piece of equipment so that the customer can add them to their maintenance records.

Children's safety is our priority, and we hope you share this value as well. We invite you to contact us if you notice any damage or a situation that could pose a risk to users!

Professionally designed

Detailed plans for every piece of equipment manufactured by Eskair, as well as their components, are made and validated by an engineer who is also a certified playground inspector. Here's an example.

Wood: low maintenance and full of benefits

Work, cracks and stain...

Eastern white cedar and western red cedar are natural materials that are subject to fluctuations in temperature. Humidity, heat and cold can cause cracks to appear in the wood other than those visible upon installation, especially within the first 2 years after installation. If the cracks do not pose a problem to the equipment's structural integrity or the safety of users, they are considered normal and part of the Eskair product.

We use oversized cedar logs to ensure long-term structural integrity (over 25 years). If a crack appears and creates a safety problem, your warranty applies. By sending us photos of the equipment, log and crack, our engineering department will evaluate the part and determine whether or not to replace it. A remedy will be proposed, if applicable.

Our equipment is generally not stained. For safety and/or aesthetic reasons, we may choose to stain certain parts of our equipment with a natural and non-toxic oil. Upon the customer's request, we can stain the majority of the equipment, for an additional fee. The unstained components do not wear out any faster. However, they will become grey over time, which is also the desired effect in order to provide color contrasts.

The wood parts require no maintenance. However, if you want to restore vibrant colors, we offer a reconditioning service. For long-term safety and maintenance reasons, Eskair does not paint its equipment and we advise our customers not to do so. The massive cedar logs we use can remain healthy for decades without treatment.

Regardless of the type of equipment you have on your playground, the key to safe and sustainable use remains regular equipment inspection and seasonal preventative maintenance. Eskair products require the same level of inspection and maintenance as all other outdoor recreational products. Here are some recommendations.

PREVENTIVE INSPECTION AND MAINTENANCE

Outdoor recreational equipment, as well as its protective surfaces, are regularly put to the test during the winter. In addition, it undergoes hundreds of children's visits each week. It is important to schedule a periodic inspection of your playground to identify small problems that may arise over time, as specified in the Canadian and USA playground standard. An inspection guide with a checklist will be provided to help you inspect and detect any safety issues. We recommend that you keep maintenance records for each piece of equipment. Don't forget to react quickly if fixes are needed!

USE

It is strongly recommended that you respect the age ranges indicated on each Eskair product's nameplate. An adult should be present at all times to supervise the proper use of play equipment and to detect hazardous items that require special attention such as broken glass or a piece of equipment that needs repair. In addition, the presence of an adult in the role of game master, instructor or supervisor can contribute a great deal to children's play experiences. It is recommended that comfortable seating be provided in front of the play areas for supervisors.

WINTERIZATION

The Canadian CAN/CSA-Z614-20 and U.S. ASTM F1487-17 standards for playgrounds and play equipment make little or no mention of how to cope with winter. However, note that your playground's safety environment may change during this period. For example, the protective surface can freeze and thus lose its damping function, or the snow around the equipment becomes, as a result of the repeated passage of the children, very hard and slippery. In addition, the openings in some of the equipment may be reduced by snow accumulation, thus representing a risk of children getting their heads stuck. Eskair's equipment is designed to be used safely during seasons in which the temperature remains above zero. Any use in other weather conditions must be supervised by a responsible adult, or completely prohibited.

Solid warranties for peace of mind

Here are Eskair's warranties on all the components of the modules and equipment we manufacture. These warranties do not cover breakage caused by vandalism.

- ✓ **Wood** - Structural beams 6 inches in diameter and greater: 12 years
- ✓ **Wood** - 3x6 logs, 2x4, 2x6 and 1x6 boards: 10 years
- ✓ **Hardware**: 20 years – When used under normal conditions and subject to properly maintaining the bolts against severe corrosion.
- ✓ **Steel cables covered with braided polyester**: 7 years - Warrantied against rupture. Scratches and other types of damage caused by normal use or impacts are not warrantied.
- ✓ **Movable fasteners carrying swings**: 15-year limited warranty – These fastener joints are warrantied against deterioration caused by severe rust (enough to interfere with use) for a period of 15 years. Impacts, scratches and wear marks on moving parts and their pivots resulting from normal use of the equipment are not warrantied.
- ✓ **Swing seats**: 5 Years – Warrantied against deterioration sufficient enough to affect user safety for a period of 5 years. Scratches and other types of damage caused by normal use or impact are not guaranteed.
- ✓ **Aluminium parts**: Limited lifetime warranty - Warrantied for the normal lifetime of these type of parts, when used under normal conditions and properly maintained.
- ✓ **Steel parts**: 15-year limited warranty - 15-year rust-induced perforation warranty, excluding steel cables.
- ✓ **Recycled tires**: 10-year warranty - We use recycled tires in playgrounds. These tires are cleaned and disinfected.
- ✓ **Landscaping and installation**: 1-year warranty on landscaping and equipment installation.

Some of the equipment we offer, such as aluminum play modules or concrete furniture, comes from reliable suppliers with whom we have a solid relationship. Their warranties are available to you if required.

Our sales team is waiting for your call to help you create your new recreational design!

ventes@eskairamenagement.com

"As a schoolyard project manager, Eric has helped us greatly in all stages, including support, estimates and installation. His knowledge saved us time and money. I enjoyed working with Eric, his approach is friendly and he always has a solution to offer us."

Luc Michaud, Dir. *École Jardins des lacs*, St-Denis-de-Brompton

"Thank you Eric, to you and your team, for the construction of two parks within our municipality. There were many comments from citizens over the summer to express their satisfaction with the final result."

Through our more limited resources, your support in the parks' design enabled you to draw on your expertise and develop several innovative and practical ideas, ideas that we had not thought of prior and yet made all the difference for our residents. [...]"

The work for the layout and installation of the various modules was done with high quality, on time and at a lower cost. It was truly a more than profitable partnership!"

Matthieu Levasseur, Dir. General, Ste-Clotilde-de-Horton

Sensory play

Description

This garden planter will be a hit in your social area or your urban garden. Made of solid cedar logs and 2" x 6" planks, this garden planter will stand the test of time and weather. The benches on the side serve as a resting area and allow the little ones to reach into the planter easily. It can be custom-built according to your needs.

Circular concrete trash can

PRODUCT CODE :

MOBI-005

Description

This circular concrete bin is an excellent addition to your urban equipment to ensure the premises are kept clean. It can be used for both waste and recovery. The lid removes easily when it comes time to empty it. Its strength and durability are more resistant to vandalism. Its weight makes it difficult to tip over.
